far beyond ordinary

SNOWBOARDS

FAR BEYOND ORDINARY

To go far beyond ordinary begins with curiosity,
Toward a horizon of boundless blue and grounding green,
filled with endless possibilities.

The sky invites us to imagine beyond what we can see,
While the ground keeps us steady, guiding each decision
with purpose.

Progress here is rarely linear,
always accelerating and decelerating—
Where grand ideas meet meticulous exploration,
turning the unusual into the essential,
Transforming raw energy into pinnacle power.
It's crafted in milligrams and millimeters—
A balance of graphite, resin, and paint, each layer fine-tuned,
Every fiber placed to bring out the best in every swing.

Walking with a rhythm of quick trials,
insights gained, and constant refinement,
A quiet resolve to push forward when pausing would be easier.
The horizon doesn't take us to a single destination—
it sets us on a journey.

A journey where going far is about seeing
challenges as opportunities,
And believing the entrance to the next breakthrough
is always closer than we think.

Structure

CRID

The honeycomb area of the tip section is further increased from STOMP-TECH 3.0, and carbon on the ribbon is placed to further reduce the swing weight and repulsive performance.

ISOMETRIC TIP

The square shape expands the sweet area of the tip for improved stability during ollies and landings.

CENTROID

The nose is lightweight and the weight balance is closer to the stance center, making it difficult for the nose to get buried, allowing for comfortable powder skiing.

STOMP-TECH 3.0

Honeycomb composite in the tip section reduces the weight of the swing weight.

Carbon Shelled Microcore Construction

The outer shell made of high-strength carbon is filled with a micro core with excellent shock absorption properties. Lightweight while maintaining strength.

X MORE POP TIP

Carbon ribbon is placed from the foot to the tip, allowing power to be stored without loss when ollieing and utilized for tricks.

V POP TIP

Carbon ribbon is placed from the foot to the tip to maintain tip rigidity for a stable press.

Materials

-SERVO FILTER-

A special epoxy resin that enhances vibration damping while maintaining flexibility. Placed between carbon layers for increased stability and to eliminate instability caused by weight reduction.

※SERVO FILTER is a vibration-absorbing film developed by the Mitsubishi Chemical Group, which has high bonding properties with graphite and excels in both flexibility and durability.

Namd™

A new carbon material that converts stiffness to resilience even under high loads.

※Namd™ is a technology developed by Nitta Corporation to composite nano-dispersed carbon nanotubes into a graphite fiber.

2G-Namd™ Speed

A new carbon material with a three-dimensional CNT layer structure that dramatically improves the force converted into repulsive force through the interaction of carbon fibers compared to Namd™.

※2G-Namd™ is a technology developed by Nitta Corporation to composite nano-dispersed carbon nanotubes into a graphite fiber.

TORAYCA M40X

New Dimension graphite that combines "strength" and "repulsive performance"

※TORAYCA™ M40X is a next-generation graphite fiber developed by Toray Industries, Inc.

NANOMETRIC DR

Graphite with high-bending, strenghten material that combines high resilience and durability,

※Nanometric is a material developed based on Toray's NANOALLOY™ technology.

NANOMETRIC XT

Graphite material with higher vibration absorption and more tenacious strength than conventional graphite.

※Nanometric is a material developed based on Toray's NANOALLOY™ technology.

POP LAUNCHER

High-modulus graphite composites at both ends of the square tube for increased repulsive performance.

ABSORB DECK

Deck surface is made of a material with high vibration damping properties. The material provides a smooth, lickable ride on the snow surface.

STABELA

Lightweight and highly vibration-damping material composites with carbon. This material suppresses vibration from the snow surface during sliding.

AZ31

Contains highly vibration-damping magnesium to enhance performance at high speeds.

A.V.C

Thick elastomer. High vibration absorption and excellent straightness at high speeds.

S.A.V/Elastomer

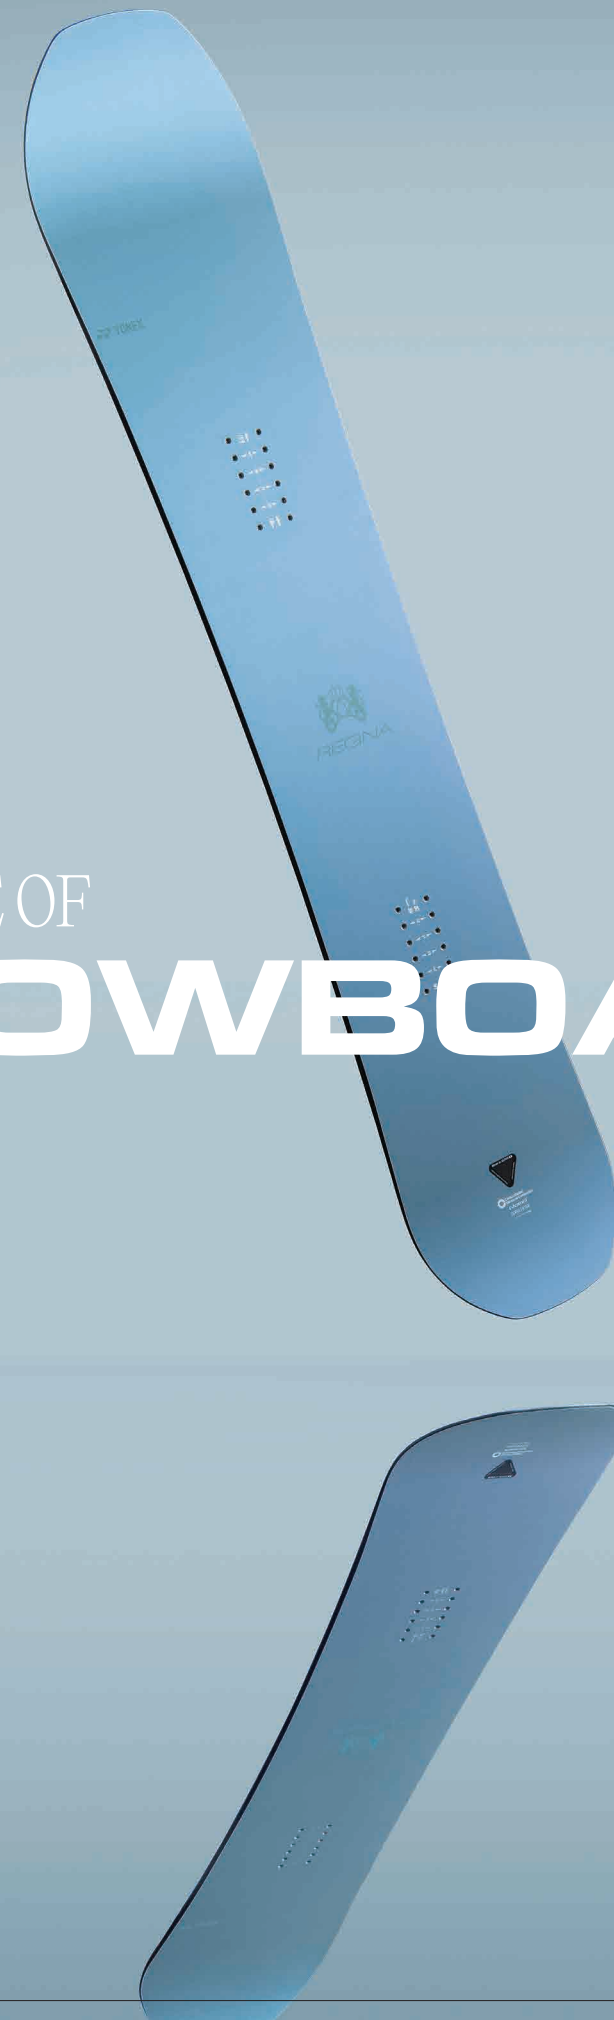

Thick elastomer. High vibration absorption and excellent straightness at high speeds.

REGNA

FREERIDE

World's lightest at
1900g
※154cm

The entire board is made of a composite of high-bending carbon NANOMETRIC DR, which has 13% increase in strength and 8% increase in flexibility, leading to a weight reduction of about 5%.

Highly elastic and adherent material
Adopts the new material SERVO FILTER, which retains flexibility and has 14% better vibration damping.

The world's lightest board, further evolved with the introduction of new materials.

The introduction of "Nano-metric DR," a carbon material that achieves high strength and weight reduction, and "Servo Filter," a new material that improves vibration damping, has resulted in an even lighter structure. While pursuing lightness, it also suppresses vibrations, improving ease of riding and stability.

※Namd™ is technology developed by Nitta Co., Ltd. to uniformly disperse carbon nanotubes in carbon fiber composites.

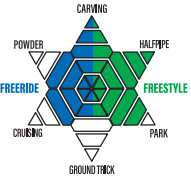

ALL AROUND

Yuto Totsuka Model

Taking on the highest level of freestyle performance.

A high-performance board that challenges the world's best. Built with a lightweight swing weight construction "CRIC" and incorporating special carbon for both strength and flex. This board delivers outstanding responsiveness with its resiliency, and powerful ollie power for executing high-difficulty tricks.

REV

Item Code : **RE25**
Size : 150 ・ 153 ・ 156 ・ 159
Color : Snow White
Made in Japan
Structure : CRIC + H.M. Graphite Composite Square Tube
Material : H.T. Graphite + H.M. Graphite + M40X / ISO CORE / Aramid Honeycomb

WOMEN

Sena Tomita・Ruki Tomita Model

For the female snowboarders who desire a high-performance model they can trust.

This high-performance all-around model has been meticulously balanced to perfectly fit all women. While prioritizing ease of riding, it delivers sharp carving, high jumps with stable landings, and confident control during high-rotation spins.

ISOMETRIC TIP

SLEEK

Item Code : **SL25**

Size : 138・142・146

Color : Blue/Orange

Made in Japan

Structure : CRIC + Graphite round tube

Material : H.T.Graphite + NANOMETRIC XT / ISO CORE / Aramid Honeycomb

Base Material : ISO SPEED 7500・Structure finish

Size	Length	Effective Edge	Running Length	Nose Length	Tail Length	Nose Width	Waist Width	Tail Width	Side Curve	Stance Width	Set Back	FT Value

FREERIDE

LUVARTH

GLIDE GRACE

New structure

In addition to Centroid structure, CRIC is used in the nose section, and the swing weight is 2% lighter than before. This improves maneuverability in deep snow.

New materials

Highly elastic and adherent material
Adopts the new material
SERVO FILTER, which retains flexibility and has 14% better vibration damping.

Surface area

For better float of the board, the width of the tail and waist of the board were increased, increasing the overall surface area by 2%.

New shape

The new shape of the tail reduces resistance by allowing the snow to flow to both left and right in deep snow, making it easier to make turns.

New shape

The new shape, which reduces the surface area of the tail, reduces friction with the snow and allows the snow to flow more efficiently. This new shape offers maneuverability in deep snow and also allows you to enjoy carving on the groomed slopes.

Light yet dynamic, cruising through deep powder.

Featuring a wider profile and a newly shaped tail, this board boasts a fresh silhouette. The large, buoyant big nose incorporates a weight-saving cutout construction. With maneuverability that belies its appearance, it allows you to freely cruise through deep powder.

LUVARTH

Item Code : **LU25**

Size : 148 · 153 · 158

Color : Ruby Red

Made in Japan

Structure : CENTROID

Material : H.T. Graphite / ISO CORE / Aramid Honeycomb / SERVO FILTER

Base Material : ISO SPEED 7500 Graphite

WOMEN

Enjoy ground tricks more gentle and easy. The classic ground trick board for women.

Developed for women with less leg strength to enjoy the movements of ground tricks such as pressing, sliding and popping easier. The wide nose and tail provide high stability, allowing you to confidently shift your weight and smoothly initiate tricks.

OUR RANGE OF BINDINGS

SPINE CUSTOMIZE SYSTEM

Choose the perfect highback flex to match your Riding

Customize the flex to fit your purpose as easy as shifting the round graphite shaft (stiffness adjustable) to the spine.

SPINEBACK

Highback

Changed to a stiffer setting, the response has improved for quicker turns.

Baseplate

Polyurethane is combined around the heel to improve vibration absorption, suppress twisting, and efficiently transfer the weight to the board.

SPINEBACK Item Code : BDSDFS05

Size : XS · S · M · L

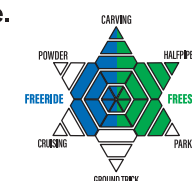

Color : White

Material : Base / Nylon, Glass Fibre

Highback / Graphite, Nylon, Aluminum Made in China

Enhanced shock absorption performance. Quick and precise control.

Equipped with a rigid highback and shock-absorbing material on the heel section of the base. This binding delivers a quick response even under aggressive riding, and yet It facilitates smooth torsional flex for further enhanced control.

SPINEBACK FB Item Code : BDSDFS03

Size : S · M · L

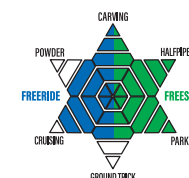

Color : Off White, Dark Gun

Material : Base / Nylon, Glass Fibre, E.V.A

Highback / Graphite, Nylon, Aluminum Made in China

A flexible underfoot response for a wide range of needs.

Designed to go well with the boards that have softer flex and torsion. This binding features a flexible base to increase the underfoot interaction. It has a wide range of adaptability for low to mid-high speeds, covering everything from free riding to tricks.

SPINEBACK MFB Item Code : BDSDFS04

Size : S · M · L

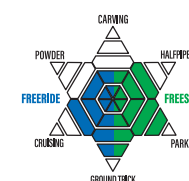

Color : Grayish Green, Deep Sky

Material : Base / Nylon, Glass Fibre, E.V.A

Highback / Graphite, Nylon, Aluminum Made in China

Master the art of style with a soft base design.

This binding is designed to emphasize flexible movement in powder and tricks with the most flexible soft base. It improves stability in riding tricks performed at low to medium speeds and stylish expression in popping tricks. New color Deep Sky is now available.
