Years from now, this racquet will be lighter and stronger than you could ever picture. Fully packed with new innovations. All those innovations are bound to be discovered. They’re all hidden, impatiently waiting to be uncovered.

When I get my hands on this racquet, it will be the culmination of thousands of ideas, tried and failed. It will be standing proof, that endlessly testing both expected and unexpected ideas will mold the basis for game-changing performance.

But this racquet won’t uncover itself — not without a little imagination.

It’s time I search beyond what I knew today.

“ENGINEERED FOR YOUR GAME.”
Developed over 30 years ago, the ISOMETRIC™ design increases the sweet spot by 7%*. Compared to a conventional round frame, a square-shaped ISOMETRIC™ racquet generates a larger sweet spot by optimizing the intersection of the main and cross strings. ISOMETRIC™ technology delivers greater control without sacrificing power.

Revolutionary Graphite

Staying true to our roots, our graphite is sourced and engineered in Japan, giving our research and development team the opportunity to utilize a wide range of materials that suits players of all levels.

Aggressive, attacking spin for pinpoint control is achieved through a carbon nanotube structure that binds the graphite fibers together, which reduces energy loss. Due to its resilient properties, the material flexes and provides quick snapback.

Namd™ is technology developed by Nitta Co., Ltd. to uniformly disperse carbon nanotubes in carbon fiber composites.

2G-Namd™ Speed

Designed to produce flex and power, 2G-Namd™ Speed is developed from high modulus graphite fibers bound with CNTs, resulting in a material that transfers energy into quick snapback.

Namd™ is technology developed by Nitta Co., Ltd. to uniformly disperse carbon nanotubes in carbon fiber composites.

VDM

Vibration Damping Mesh

First used in our snowboards to reduce vibrations at impact, Vibration Damping Mesh (VDM) is now used in four of our racquet series. VDM is a stretchy mesh material that is wrapped around the graphite within the grip to filter unwanted vibrations and improve touch and precision.

A transparent and elastic film placed between graphite layers helps bond the layers while maintaining its elastic characteristics even after the molding process. This unique film absorbs unwanted vibrations, provides fine-tuned flex and snapback to each shot, delivering precise sensory feedback from the ball to the hand.

SERVO FILTER

A transparent and elastic film placed between graphite layers helps bond the layers while maintaining its elastic characteristics even after the molding process. This unique film absorbs unwanted vibrations, provides fine-tuned flex and snapback to each shot, delivering precise sensory feedback from the ball to the hand.

SERVO FILTER is a vibration-absorbing film developed by the Mitsubishi Chemical Group, which has high bonding properties with graphite and works in both flexibility and durability.
The all-new PERCEPT racquet series caters to the demands of mid to advanced-level players, who seek precise ball and trajectory control. Players can “Perceive, Control, Create” with PERCEPT by enhancing their ability to feel the ball, improve their control, and create their own distinct game on the court.
The tapered and elongated box frame allows the shaft to flex comfortably, extending the ball pocketing duration for more feel and control. The flexibility is enhanced by the "2G-Namid™ Flex Force," a highly elastic graphite that enables 15%* more flexibility on the racquet shaft.

*Tested by Yonex

FOR IMPROVED CONSISTENCY
The frame employs more layers* of graphite to increase rigidity of the racquet face.
3% more stability on the racquet face, providing improved consistency in ball trajectory.

*Compared to previous control-oriented racquet models.
*Tested by Yonex

MORE FLEXIBILITY
A transparent and elastic film placed between graphite layers helps bond the layers. This unique film also absorbs unwanted vibrations, providing multiple benefits to the racquet.

The seventh generation VCORE is a masterpiece of technology and craft. The evolution of this iconic racquet combines undeniably precise spin and remarkable control, creating a true work of art.

New technology and structure combine with innovation to increase string snapback and movement, giving players access to the most spin in Yonex tennis history.
Incorporated in the upper throat to the lower frame, the new Flex Force graphite allows for the racquet to quickly flex and snapback for maximum spin potential.

New silicone oil infused within the grommets allow the racquet to quickly flex and snapback into its original position.

Aero Trench and Aero Fin Technology reduce air resistance for easy maneuverability and added spin.

A wider frame at 2 o’clock & 10 o’clock position increases the ball contact area, which produces a higher launch angle.

This "torsional resistance" helps stabilize the racquet, reducing power loss.

Area 1 is T shaped cross section. Area 2 is H shaped cross section.

COMFORT

PREMIUM PERFORMANCE

The ASTREL series embodies premium performance. With a focus on comfort and easy power, the ASTREL is designed for recreational and doubles players. From the graphite, to the grommets, to the grip, the ASTREL is gentle on the arm without sacrificing power.

NEW GROMMET SHAPE

BALL-POCKETING
An oval-shaped grommet on the upper frame and a trumpet-shaped grommet on the side frame allow for greater ball pocketing and string movement.

FLEXIBILITY & SNAPBACK

The shaft is composed of 2G-Namd™ Speed. It provides better flexibility and power. As a result, the energy is transferred into a quick snapback.

FILTERING UNWANTED VIBRATIONS

STRETCHY mesh material is wrapped around the graphite in the yoke and grip area. This removes unwanted vibrations in the grip and reduces strain on the arm and body.

INVESTING IN THE FUTURE OF TENNIS

Vamos•J is a global camp that aims to promote tennis and develop high-performance young players through unique programs and life experiences.

Since 2011, Vamos•J has welcomed thousands of participants and expanded its presence all around the world to offer young players access to world-class trainers and coaches, professional clinics, and guidance on the mental game.

Vamos•J alumni include current ATP and WTA players like Belinda Bencic (SUI), Jaume Munar (ESP), and Olga Danilovic (SRB), who credit Vamos•J for impacting their junior careers before turning professional.

Through initiatives like Vamos•J, Yonex is proud to support aspiring professionals and help the dreams of young players come true.
Properly introducing tennis to younger players is critical. These three progressive stages train players to develop a range of physical skills, as well as gradually learning the tactical and technical elements of tennis on smaller courts using slower balls.

Strength in Strings - from power to precision and spin to comfort, Yonex strings are dissected down to the last millimeter to ensure perfection in every polyester, multifilament, and synthetic gut string produced. Top professionals have found enormous success with our polyester and multifilament strings.
Silicone oil is infused deep into the polymers of the string, creating a smoother surface.
Silicone Oil Infused Fiber (SIF) technology reduces the friction between strings, resulting in faster ball speed and improved spin.
